STATISTICS RELATIVE TO THE APPLE

PROCESSING INDUSTRY IN NEW YORK STATE

1947-58

This report presents statistics on the apple processing industry in New York State (including cider mills, canneries, freezing plants, evaporators, and other processors) for each crop year from 1947 through 1958.

New York State processors received 10.2 million bushels of apples in their plants in 1958, about 39 percent more than in 1957 and the largest quantity since records were started in 1937. Receipts in eastern New York were below those of 1957 due primarily to the smaller crop in the Hudson Valley (table 4). Receipts in western New York were sharply higher than in 1957, in line with the big increase in size of crop. Only 1.5 percent of the total 1958 receipts came from outside the State.

Approximately three-fifths of the apples processed were used for canning and applesauce, including baby food; about one-fourth for cider and juice; and drying, freezing, and other products accounted for the rest. Statistics for the industry engaged in the daily preparation and shipment of fresh sliced apples to pie bakers are included here only when this operation takes place in or near the apple producing areas. In New York City (for which data are not included) this business is carried on quite extensively, using open-market or contract purchases of apples throughout the year.

There were 200 plants making cider or other products during the 1958 season compared with 210 in 1957.

The Crop Reporting Service acknowledges with sincere appreciation the generous cooperation of the people in the apple processing industry whose reports have made possible this summary.

Wm. I. BAIR Agricultural Statistician In Charge

^{1/} Apples received at a plant and then transferred to another plant for processing are included only in plant where processed. One bushel is assumed to equal 48 pounds.

^{2/} Among other products for which these apples were used are jelly, apple butter, mincemeat, and fresh sliced apples for pies in upstate areas. Included also are small amounts of loss and shrinkage and some apples sorted out for sale as fresh fruit.
